

FOR IMMEDIATE RELEASE

AZCO Achieves Advanced Erector Certification Through American Institute of Steel Construction

APPLETON, Wisconsin (Oct. 6, 2020) — AZCO, part of the Burns & McDonnell family of companies, has achieved advanced erector certification through the [American Institute of Steel Construction \(AISC\)](#), the trade association for the use of structural steel in the U.S. construction industry.

The designation recognizes AZCO's dedication to quality in steel construction. Certification formally acknowledges and highlights that AZCO has the personnel, knowledge, organization, equipment, experience, capability, processes, procedures and commitment to successfully plan and execute large, complex AISC-based steel erection projects.

"This is an important designation to AZCO and it reaffirms what we have known all along — that our commitment to quality and excellence resonates with the clients we serve as well as our employee-owners," says [J. Brett Williams](#), AZCO president.

AISC certification looks beyond product inspection to examine a company's quality management system as a whole. AISC-certified companies are required to have quality management systems that cover the entire fabrication or erection process. To achieve certification, companies must follow documented procedures to ensure that they deliver a consistent level of quality throughout the structural steel erection process.

AZCO provides structural steel erection and construction for a variety of industries including power generation; renewables; oil and gas; food and beverage; manufacturing; mining; pulp and paper; and industrial processing.

[AISC certification programs](#) set the quality standard for the structural steel industry and are the most recognized national quality certification for the industry.
